Summary Information

Repository:	M.E. Grenander Department of Special Collections & Archives
Title:	Raymond Falconer Papers
ID:	ua902.014
Date [inclusive]:	1942-1999
Physical Description:	96 cubic ft.
Physical Location:	The materials are located onsite in the department.
Language of the Material:	English .
Mixed Materials [Collection]:	X
Abstract:	The Raymond Falconer Papers document Falconer's work in the fields of atmospheric science and meteorology, as well as his time at the Atmospheric Science Research Center (ASRC).

Preferred Citation

Preferred citation for this material is as follows: Identification of specific item, series, box, folder, Raymond Falconer Papers, 1942-1999. M.E. Grenander Department of Special Collections and Archives, University Libraries, University at Albany, State University of New York (hereafter referred to as the Falconer Papers).

Biographical Sketch

Raymond Falconer is a meteorologist and atmospheric researcher. Falconer was hired as the first full-time employee at the State University of New York at Albany's Atmospheric Science Research Center (ASRC) in 1961 and worked with its founder Vincent Schaefer for many years. He was the first manager of the ASRC's Whiteface Mountain Observatory, which is still in use today. Prior to his work at the Center, Falconer had acted as a weather observer on Mt. Washington in New Hampshire and worked under Nobel Prize Winner Irving Langmuir at General Electric Research Laboratory on the Project Cirrus cloud seeding program. Falconer also became known for his weather reports delivered over the air throughout the Capital Region. He also developed an annual lecture series to spur interest in the

environmental sciences in the general public. This series has since been renamed in his honor and is now known as the Falconer Natural History Lecture Series.

Scope and Contents

This collection documents the professional career of Raymond Falconer, from his employment at the General Electric Laboratories to his time with the University's Atmospheric Sciences Research Center (ASRC). This collection documents the wide breadth of activities that Falconer was engaged in over his long career in atmospheric science and meteorology.

Many of the files in this collection relate to the various research projects conducted by the University's Atmospheric Sciences Research Center (ASRC) during Falconer's time affiliated with it. Most of those files within this collection relate to projects that Falconer himself managed, including his work at the ASRC's Whiteface Mountain Field Station. These files include film reels, correspondence, memoranda, contracts and budget materials related to the administration of various ASRC projects.

The collection also documents his activities outside of the ASRC. These include his meteorological measurements taken at Mount Washington Observatory in New Hampshire, research reports from his time with the General Electric Weather Bureau in Schenectady, his work on Project Cirrus, and files related to his work under Vincent Schaefer with the Munitalp Foundation. Also included are a variety of publications held by Falconer, including scientific reports, dissertations, and conference reports from organizations he was affiliated with, including the Eastern Snow Conference.

The Falconer Papers also feature many files related to Falconer's work as a weather forecaster. These include weather reports and measurements from various locations that Falconer worked at from the late 1940s into the 1990s. These files include scripts from Falconer's radio show, listener correspondence, printouts of meteorological data, almanac figures and weather and climate data used by Falconer as part of the weather reports he delivered. Finally, the collection contains files related to the Falconer Natural History Lecture Series, primarily correspondence with speakers and the Research Foundation.
