Immigration Ban Sends Ripples to UAlbany

By TYLER MCNEIL

A new executive order signed by President Donald Trump temporarily halted immigration into the U.S. for people from seven Muslim-majority nations.

The U.S. is not the only country that has enacted policies to protect those who are viewed as “Muslim.”

Among other things, Trump’s order restricted travel for people from Iran, Iraq, Syria, Yemen, Somalia and Libya from entering the country — even prohibiting entry of those with existing legal permission to live in the U.S.

On the long list of people affected by the ban are international students, many of whom have resided in the country while attending school.

At the University at Albany, 35 international students as well as several visiting scholars and faculty members are being urged not to leave the U.S. in response to the ban.

“President James Stellar voiced his concern over the ban and the implications the restrictions could have on UAlbany’s international community,” Stellar said.

While there are no enrolled international students at UAlbany unable to re-enter the U.S. as a direct result of this order, a visiting scholar at the university who was afraid when the ban was instated is now having trouble getting back into the U.S. for a conference.

Although the identity of the researcher was not released, Michael Elliott, the director of the International Student and Scholar Services, explained that the administration is working on the scholar’s behalf to aid in the re-entry process.

The identities of the 35 international students from affected nations were withheld as university officials indicated they fear unsafe. A private meeting was held for the students last Thursday, allowing those affected an opportunity to voice their concerns to local immigration experts.

For students to gain experience, in spite of using many technological developments. The apparent ban also plans on bringing in traditional first responders like police officers and firefighters to the college.

Industry also involves the advancement of technology such as, sensors which can monitor air quality.
In the lobby of the Egg on Saturday afternoon, eager voices could be heard singing to the tunes of Chinese New Year festivities. In the Capital Region. This year was co-sponsored by the Confucius Institute at the University at Albany and the Chinese Community Center of Capital Region. A fun-filled program with displays of Chinese culture, ranging from fish stalls to martial arts displays, from local kids and Chinese performers. The celebration is a mix of activities targeting parents and grandparents seeking ways to introduce to you in Chinese traditional music, dance, displays, from local kids and Chinese performers. The celebration began around 3pm on January 28th, and it lasted until well past midnight, with the last display being the result of the Chinese Community Center performance. The final act was performed by the Chinese High School students, who entertained the audience with their lively and colorful dance performances. In addition to the traditional Chinese New Year dances, the audience was treated to a variety of performances, including martial arts displays, Chinese opera performances, and traditional music. The event was a great success, with hundreds of people attending and enjoying the festive atmosphere. The Confucius Institute and the Chinese Community Center should be commended for organizing such a wonderful event that brought people together to celebrate the New Year.

Since the 15th century anatomy students have been learning on cadavers. But with the rapid growth of technology, graduate students are increasingly turning to advanced computing modeling instead of preserved dead humans, and some educators are questioning if the next generation of students are losing out on a valuable early experience.

While in medical school, dissecting cadavers is mandatory for graduation. For good reason, no patient would want the doctor performing heart surgery for the first time to have never seen or felt a real human heart; in undergraduate anatomy classes there is no formal policy that requires students to learn on cadavers. The point of undergraduate anatomy and physiology is to learn a general overview of the parts of the body and how they work, which is the basis for all forms of study on the human body. Students enrolled in undergraduate anatomy classes may go on to become medical doctors, nurses, physical therapists, chiropractors, forensic anthropologists, and biological anthropologists, just to name a few.

But human anatomy computer programs fall short in reproducing the variability of the human body. Take a look at the person sitting next to you. Their hands don’t look like yours, their feet aren’t the same length, and hopefully they’re not the same age. This is the product of sexual reproduction where genes are mixed at random.

According to Adam Gordon, a paleoanthropologist and the director of the human biology program at the University of Arizona, a population is important for students to see and learn.

“It’s only helpful if a lab where you have multiple dissections going on at once is the product of sexual reproduction where genes are mixed at random,” said Gordon.

Despite these issues, UAlbany does not use cadavers in its anatomy course.

UAlbany professor Cara Ocobock, who studies the human body in extreme environments, agreed that students are not always prepared for the real world.

Ocobock, who used to teach anatomy at Grand Valley State University where undergraduate students used cadavers, said when he first started moving from introductory anatomy courses to a course on using real dead bodies, “they say this looks nothing like the picture.”

A huge part of the cadaver experience is actually feeling tissues and seeing the relationships between different body parts. “We need to realize that cadavers and laser scans are 3D visual cues,” said Gordon. “And it’s hard to quantify but there’s at least for myself, a qualitative difference, at least initially.”

A downside to using cadavers is the human tissues and muscles are of course real and they can get destroyed when students cut through muscle to get at other structures they need to study. Once destroyed, those muscles and tissues can no longer be used for study. The computer models have an advantage because students can easily dive into the deepest parts of the human body without ruining the chance to go back and look at those structures closest to the skin.

When undergraduate anatomy programs do have cadaver-based labs, most often there is a medical school attached to it. This allows the bodies already dissected by the student to be passed down the graduate level student who needs to be passed down to the undergraduate student in the study, dramatically reducing the cost to the undergraduate program.

But for a university without such labs, housing, preserving, and using body parts for undergraduate study can cost hundreds of thousands of dollars.

However, while important, UAlbany does not use cadavers in its anatomy course.

The Impact of Event Scale, according to Rutgers University, is a 4.5-stem questionnaire, which attempts to “reflect the intensity of the post-traumatic phenomena.”

Student health may be another factor.

Formaldehyde, a chemical used to preserve biological tissue in cadavers, readily breaks down into a much simpler form as the toxic gas formaldehyde, which can cause irritations like rhinitis and conjunctivitis. The CDC says that some people are more sensitive than others and while one person may be perfectly fine around the gas, others may end up sick or uncomfortable.

The CDC also warns that prolonged exposure to formaldehyde will lead to cancer, although there isn’t enough research to determine at what levels of exposure that is. Hilton, who’s been teaching anatomy since 1990, and in recent years has seen a considerable shift away from gross anatomy, which is anatomy at the macroscopic level, toward biochemical anatomy, or microscopic level. So, students are spending less time learning about the muscles as a whole, and are spending more time under microscopes looking at the tissues up close and how different chemicals react with the cells.

In a joint study between Stanford, Michigan State University, and University of Central Michigan in 2014, it was concluded that cadaveric learning is better than learning with computer models.

“The findings indicate that educational technology can enhance anatomy instruc- tion but is unlikely to fully replace cadavers,” said Cary Roseth, a co-author of the study.

Students learning on the cadaver were 16 percent more likely to identify body parts than those learning on the multimedia system, and 11 percent better at explaining physiology.

But whether students catch up as they come face-to-face with a cadaver is another question, given the myriad of questions. But that’s science, right?

The Albany Student Press: Free of Alternative Facts since 1916
Uber came under fire when its CEO, Travis Kalanick, joined Donald Trump’s economic advisory board. Yet what really tipped the United States of the world was when the business during the protest against immigration ban. They not only continued business, but made their price cheaper even as a kick back the same day. John F. Kennedy International Airport is not cheap. The protest at JFK consisted of taxi drivers who stood in solidarity, coming together in order to go against the ban of Muslim refugees, and stopped any people arriving from seven countries in the middle east. The seven countries consisting of: Iran, Syria, Yemen, Iraq, Somalia, Libya, and Sudan. Refugees are being blocked from the U.S. for 120 days, where as people from the seven countries are blocked for 90 days. These countries have the majority as people who follow Islam, so the ban intentionally targets Muslim people. Countries such as Libya have 97 percent of their population as Muslim and Sudan has approximately 97 percent as well, according to muslimsinafrica.

Sudan. Refugees are being blocked from entering from seven countries in the middle east. The seven countries consisting of: Iran, Syria, Yemen, Iraq, Somalia, Libya, and Sudan. Refugees are being blocked from the U.S. for 120 days, where as people from the seven countries are blocked for 90 days. These countries have the majority as people who follow Islam, so the ban intentionally targets Muslim people. Countries such as Libya have 97 percent of their population as Muslim and Sudan has approximately 97 percent as well, according to muslimsinafrica.

The New York Taxi Workers Alliance observed an 80% drivers, as well as a 70% of our member are Muslim,” said co-founder Jawad Yang. With this in mind, it’s clear that the NYTWA would take offense to the recent ban. In their response they said,“this lack of business is in that it’s an

intensive location in order to portray an impactful message: NYTWA said in their tweet, “NO PK ups. JFK Airport 6 PM - 7 PM today. Drivers stand in solidarity with thousands protesting Muslim and International 9/11.

Although making life a little harder for people at the airport for one hour, humanity can endure that little hiccup in their day. And of course, no one is obligated to stand with the NYTWA. No one was obligated to stop their business. Nevertheless, seeing that other companies are taking advantage of the NYTWA’s ban in half of the business, it’s not complementing the case, especially if the business is adjusting their prices for the occasion.

Uber NYC took to twitter during the protest, saying “pricing has been turned up at JFK Airport. This may result in longer wait times. Please be patient,” surge pricing being a main price due to peak hours. As a result Uber drivers should or should feel obligated to stop doing their business, however, if clear that Uber was taking advantage of the protest. Uber was making profit off the protest, and it would have been okay; it would have been a regular business day for Uber, yet they made special circumstances due to NYTWA stepping their service.

It doesn’t help Uber’s case that the CEO, Kalanick, is on the economic advisory council. With Uber’s action during the protest, Kalanick’s position toward Trump was brought up. These two things were connected and it didn’t make for a good conclusion. With Uber’s business decision during the protest, which is a protest that is not in favor for Trump’s recent ban, in addition to Uber’s CEO being closely associated with the president, it didn’t make for a good representation of the company. It’s not a good conclusion, it made out to seem that Uber as a whole is supporting the recent ban, which isn’t the case. Kalanick is for Trump, that doesn’t mean Uber in its entirety supports Trump. Each worker doesn’t support Trump. In fact, most Uber drivers are minorities, Muslim even. Nevertheless, the company, being owned by Kalanick, is associated with Trump; there can be no separation unfortunately, especially since he is in the economic advisory council. Or at least not too.

Kalanick said, “There are many ways we will continue to advocate for you change on immigration, but staying on the council was going to get in the way of that.” in an email to employees that The New York Times obtained. Kalanick has realized his error, or more or less realized his business has been affected in a severe way. #DeleteUber was a prominent trend and was effective, yet not using Uber didn’t solely affect Kalanick. It affected its workers.

But it doesn’t change that these actions were progressive. Protesting at the airport sends out the message that banning certain people from the U.S. is unethical. Also, simply by not using a service can show that service to the whole as what they do. Morals do matter, and people should consider the circumstances before they act. Making prices cheaper for their service at the airport doesn’t come off as a regular business decision. That decision was made with the idea that taxi cabs are protesting, therefore more clients are with the ban; sacrificing the business to stop their business. Nevertheless, people will react to your intentions of the protest. No one is obligated to use a service and in order for that service to have a wide audience, they not only have to have a good service, they have to have good ethics.

Money shouldn’t deter a person’s ethics. And if people make decisions that are based on money, that decision is on them. Nevertheless, people will react to your decisions and that’s something that’s a given, and the exactness is foreseeable.
THE SPACE BETWEEN US
NEVER LEAVES THE GROUND

By Tyler Callahan

“Resident Evil: The Final Chapter” is the final film of the Resident Evil franchise that has been around for over 15 years if you could believe it. After numerous films left fans and critics not wanting more, “The Final Chapter” delivers more of the same as its sendoff.

Following the events of the last movie “Resident Evil: Retribution”, Alice (Milla Jovovich) is in Washington DC and receives a message from the Red Queen about the Apocalypse’s end. Alice decides to go back to Racoon City and get the antivirus and release it into the air, all the human that are left will die.

What proceeds is just over 90 minutes of action—if you can follow along—and a plot that is extremely tenuous. The biggest problem with the film is the cinematography. It’s a typical scene in this film. On Earth, however, while Tulsa and Elliot snarl cars and drive across the U.S. in search of his father, the camera seems to catch up to him. Furthermore, as Tulsa was initially depicted as someone who has her walls up, she seems to suddenly support and believe Gardner after he explains his life story.

Production-wise, a ton of money was evidently invested into the special effects to animate Mars and the interplanetary travel sequences, another nice touch of this film. On Earth, however, while Tulsa and Elliot snarl cars and drive across the U.S. in search of his father, the camera presents their journey like stereotypical car commercials as they drive across gorgeous terrains. The way they steal strangers’ money, cars and the occasional Wi-Fi also feels too convenient as they always get to the place, they need to be in, on their possessions, clear proof that people are still alive in the year 2014.

However, in spite of all of these toxic ingredients scattered throughout, “The Space Between Us” does have a warm smile as Tulsa and Elliot’s relationship blossoms fairly quickly, becoming a textbook example of how even the most literally and time-longitudinal relationship could work, given how the film’s conclusion was left open-ended. Viewers—at least those who remain in their seats and must have forgiven all the film’s enormous aspects at this point—should be able to see the couple’s future. The film’s most comedic moment was when Gardner is horrified when a creature he’s never seen before conceptually passes him and Tulsa by a mere handful.

As Valentine’s Day nears, “The Space Between Us” is an adequate attempt to entertain lovers and hopeless romantics alike. But if you don’t belong to either of those two categories, like the film’s title suggests, you ought to maintain space between you and the film.

On Wednesday, high school seniors across the country signed their letters of intent, committing their blood, sweat and tears to the football program of their choice for the next four years. The University at Albany will likely never compete for any of ESPN’s top-100 ranked college football programs, but for great talent like Ellie Ikotun-Hanks, it was another strong recruiting class, even bringing in a player down to Albany to see the game.

Marr’s main point of focus is to try to shoot up on defense in front and he believes that he accomplished that goal.

“We’re really pleased with where we’re at,” Marr said. “It’s a great group of seniors who have really stepped up and are out here playing for the 2016 seniors who were important one the Danes play until the postseason. On the first game of a long season, it may be the most important. That’s our No. 1 goal coming in to the year—play on defense and rush the passer.”

The 6’2” and 290 lb. New Jersey native brings depth to a team we can do it.”

UAlbany will miss the guys who showed him the ropes, but he also knows it’s now the time to return the favor.

“We’ve been a powerhouse in our conference for as long as I can remember,” said junior midfielder Kyle Fields. “I’m very proud of the student body for filling up the seats. But I’m begging you all, please keep coming to the games. We got the Rens on offense and the other on defense. Hunter and Fields are Damon Burton and Danny Damico, two linebackers from central N.Y. who finished their high school careers with grand statistics.

“I’m excited about the class in general,” Marr said in his interview with Lewis and Foy. He also joked with the guys, “I’m excited about it being over. It’s a long process.”

By JOHN C. LONDON III

The University at Albany’s men’s lacrosse team knows it’s now up to veterans like Connor Fields and Stone Sims to lead the team and help the younger players get accustomed to the fast-paced style of the last year how we wanted to. I feel like after we started it again, but to advance further in the postseason it will be a huge hole to fill. No one individual can fill all these holes. No one individual can win a game by himself, but as a team we can do it.”

“We’ve just got to give the young guys confidence. They’re all great players. They all came here for a reason. We’re confident in them with the ball and on defense,” Fields said.

With leaders like Maloney, Riorden and Oakes off in their professional careers, it’s now up to veterans like Connor Fields and Stone Sims to lead the team and help the younger players get accustomed to the fast-paced style of the last year.

“We ended our season last year,” Marr said. “We thought we were right there and I thought we could have won that game if we had a little bit better in the 4th quarter.”

“Another guy we gave our guys something to be motivated for going into the preseason,” Marr added.

Even though UAlbany returns a lot of players with big-game experience, the Danes will miss a few key guys that graduated and sat out last year. Because of his 6’4” stature, Hunter draws comparisons to another stadium Lineman for the Danes, Matt Campion, according to Gattuso. “We really like Hunter. He’s impressed with his versatility because he can play center, guard or tackle.”

“Gattuso described Zach in a "hard-nosed kid" and a "good run-stopper," Fields said. “We really like his height. He’s very powerful and explosive,” Gattuso said.

The Danes also lacked a pair of siblings, one who played on offense and the other on defense. The younger players get accustomed to the fast-paced style of the last year. Ibitokun-Hanks tore his ACL in the last game of the season and the timetable for his return is uncertain.

“We have to keep our foot on the gas. I think we’re just as good of a team this year, if not better. We have huge holes.”

The quest for redemption started on Saturday with a matchup against Colgate. They have one final tune-up against Princeton before the first official game of the season against Syracuse. That’s, in their eyes, “We’re all pumped and ready. Syracuse is like a rivalry to us,” Fields said. “We know what they bring and we’re just ready to go.”

UAlbany can channel that energy and excitement, then the Great Danes have a strong chance of beating the Orange in the Carrier Dome. But if Marr’s team reaches new heights like it hopes to, Syracuse, as well as nonconference opponents Maryland and Yale, won’t stand a chance this season. The Danes return a major chunk of their season and that includes their most crucial piece of an improved offense, the Danes in the season opener last year. Each game was a huge hole to fill, No one individual can win a game by himself, but as a team we can do it.”

“We’ve been a powerhouse in our conference for as long as I can remember,” said junior midfielder Kyle McClane. “We take our conference games really seriously. That’s why No. 1 goal coming in to the year—winning the conference.

“With the additions to the team and one more year of experience under the belts of the returning players, the Great Danes’ roster appears to be deeper than it has in recent years. Armed with a number of strong defensive ends and defensive tackles, UAlbany looks poised to be an even more difficult to handle team. The 6’1” and 240 lb. Matt Campion, according to Gattuso. “We really like Hunter. He’s impressed with his versatility because he can play center, guard or tackle.”

“Gattuso described Zach in a “hard-nosed kid” and a “good run-stopper,” Fields said. “We really like his height. He’s very powerful and explosive,” Gattuso said.

The Danes also lacked a pair of siblings, one who played on offense and the other on defense. The younger players get accustomed to the fast-paced style of the last year. Ibitokun-Hanks tore his ACL in the last game of the season and the timetable for his return is uncertain.

Even though UAlbany couldn’t get it done on Saturday night against Stony Brook, I have to say I was really proud of the student body for filling up the seats. But I’m begging you all, please keep coming to the games. Our teams need your support. Students don’t come to these games enough on a regular basis. Do you realize we have a team that contends for championships every single season? Yes, we don’t go to a Big Ten or ACC school like some of your friends do and I know you’re jealous, but it’s what we’ve got. And I think we’re pretty lucky to have what we have. Both teams—the men and women—want to see all of the students AND faculty wearing purple and gold at SEFCU Arena over the next few weeks. We have two incredible teams here who need your help. A loud and hostile environment can make all the difference.
